Woodstox Rods

A VERSATILE WOODEN TRACKING SYSTEM

In the past using a wooden rod entailed short lengths covering only 3 traditional brackets and in straight applications.

By challenging these past constraints, Woodstox combines a wooden rod profile and a curtain track. This combination gets you the best of both worlds. The luxurious look of a wooden rod profile and the ease of use of a curtain track (Curved M-System).

Woodstox allows long lengths to be joined and bends to be accommodated. It is available as Hand Draw or Cord Draw.

It can be used as a single track rod or doubled in a configuration with any of our profiles in the M-System Bracket family, such as Curved or Square M-System or our SheerTrack.

Also available with our range of Resin Finials. Please see www.windowizard.co.nz for a full list or see our pricing booklet for details. **Please note Resin Finials are charged separate, see the pricing booklet.**

A solid timber rod, tightly secured to our successful M-System curtain track. The traditional look of timber is hard to beat. This gives the appealing look of wood, with the versatility of a track.

A choice of wood turned finials, end caps or painted resin finials finish off this decorator track rod.

Flexible installation options can be achieved with single or double installations. A back hung glider gives this track rod ease of operation and smooth gliding.

Note Due to the nature of the materials used (natural timber) your finished WoodstoxTrack Rod could vary slightly in colour from that shown in our samples or on our display boards. This can happen because we are dealing with a natural product, however this adds to the overall appearance of the Track Rod.

Delivery for Walnut and Rimu + 15 working days.
Specialty Colours + 15 working days.
For hand painted finished or specials colours please see page 4.

Bends

Woodstox bends incur a bending charge of \$51.75 excl GST plus the actual freight charge (based on cubic measure) for every order that includes a bend will apply. Woodstox bends are moulded from solid timber and available in 90 degrees and 135 degrees only. Mitred Bends are available on request.

Natural has no coating and will need to be stained, painted or sealed in some way to prevent marking to the surface over time.
